SKILLS SUMMARY

HTML | CSS | JavaScript | React | Mongoose | MongoDB | Git | Github | Data Modeling | Express | Agile Methodology | Project Management | Microsoft Office | MacOS/Windows | Google Drive | Trello, Asana + Project Planning Tools | Quality Assurance | Proficient in CRM | Remote work proficiency | Squarespace | Wix | Bootstrap | Facebook Creator Studio | Linktree | Airtable | Later | Canva

PROJECTS

The Bike Shop | Junior Product Manager and Developer| Link to Live Project: https://bikeshop305.herokuapp.com/

- The application gives people a tool to connect cyclist and bike shops, track progress of repairs, make connections to the cycling community and more.
- Led a team of 3 developers and 2 product designers by following agile project management best practice model.
- Oversaw the collaboration points between the developers and the UX/UI team. Managed the wireframe handoff through figma and strategy session to coordinate on branding and design trajectory.
- As Product Manager, organized trello board, kanban, slack network and updated this process based on the needs of the product development cycle.
- Used React Bootstrap to create modals, forms for logging in, logging out, creating a user, progress bars and for buttons. CSS was also used to style the page with the branding specified in our wireframes
- Created our own database of Bike shops that can be filtered by location. Faker was used to populate the user database and Axios was to call the backend to provide and filter through the bike shops and cyclists.
- This project was built using the MERN (MongoDB, Express, React, Node.js) Stack. Other technologies used to improve user experience were Sweet Alert, to let the user know their input was received, also to greet them when they logged in/logged out. Send Grid was used to send welcome/goodbye emails when users sign up or close the account. JSON Web Tokens were used to create tokens that validated users throughout the website. Lastly, we used Postman to test the creation of users, bike shops, cyclists, repairs, reviews and bicycles, and other HTTP requests in the backend.
- Heroku was used to deploy the app to the web.

Git Brew'd | Junior Product Manager and Developer | Link to Live Project: https://gitbrewd.herokuapp.com/

- The application gives people a tool to find local breweries throughout the United States.
- Led a team of 4 developers by following agile project management best practice model.
- As Product Manager, organized trello board, kanban, slack network and updated this process based on the needs of the product development cycle.
- This project was built with vanilla CSS and React and integrated the DB brewery API. Axios is used to make requests to the API to gather information and Mapbox to render the location of the brewery on a map.
- Heroku was used to deploy the app to the web

EXPERIENCE

Wyncode Academy | Full Stack Web Development | Miami, Florida | Dec 2020

- Acquired a robust knowledge base working with JavaScript, CSS, HTML, React, Mongo-DB, Mongoose, Node.js, git, github, de-bugging, and data modeling
- Composed backend architecture from multiple API's using Axios, Express, and ERD diagrams
- Collaborated in depth with UX/UI teams on frontend architecture and design, built out with Web Dev team
- Led and managed midterm and final project teams by implementing Agile Methodology and operating as SCRUM Master

[Streaming Strawberry](#) | Lead Product Manager and Developer | Miami, Florida | 2019 - Current
Development and design agency specializing in sites that focus on customer's optimal experience on a budget

- Work alongside Doron Greenspan, MongoDB account executive on 3+ projects, as both product manager and Tech founder.
